

Ioxi-ty Post-2400 Unrated 10+0 Report

Corrected sample: only unrated 10+0 rapid games after the rated 2400 milestone

- Milestone boundary: first rated 2400+ 10+0 game ended 2026-06-08 19:12 at rating 2401. All unrated games before that are excluded.
- Post-2400 unrated sample: 50 games from 2026-06-08 to 2026-06-17, record 32-6-12, score 70.0%, PR about 2300 versus 2153 average opposition.
- Peak rated streak: 25 games, record 19-0-6, score 76.0%, PR about 2553 versus 2353 average opposition.
- The main drop is not that you forgot how to play. It is that the post-2400 unrated block has lower intensity: weaker opposition, more blunders, more quick bad moves, and slower early time usage.
- Best current mode remains clean/control chess. Worst current mode is messy tactical/unrated experimentation, especially when quick decisions appear in the middlegame or late conversion phase.

Sample	Games	Record	Score	Avg opp	PR
Peak rated streak	25	19-0-6	76.0%	2353	2553
Post-2400 unrated	50	32-6-12	70.0%	2153	2300

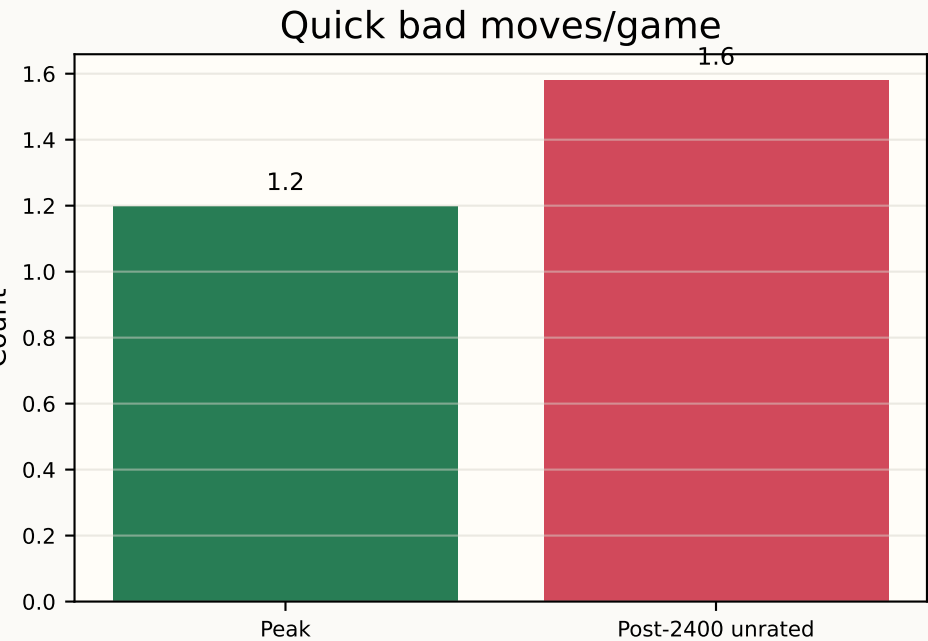

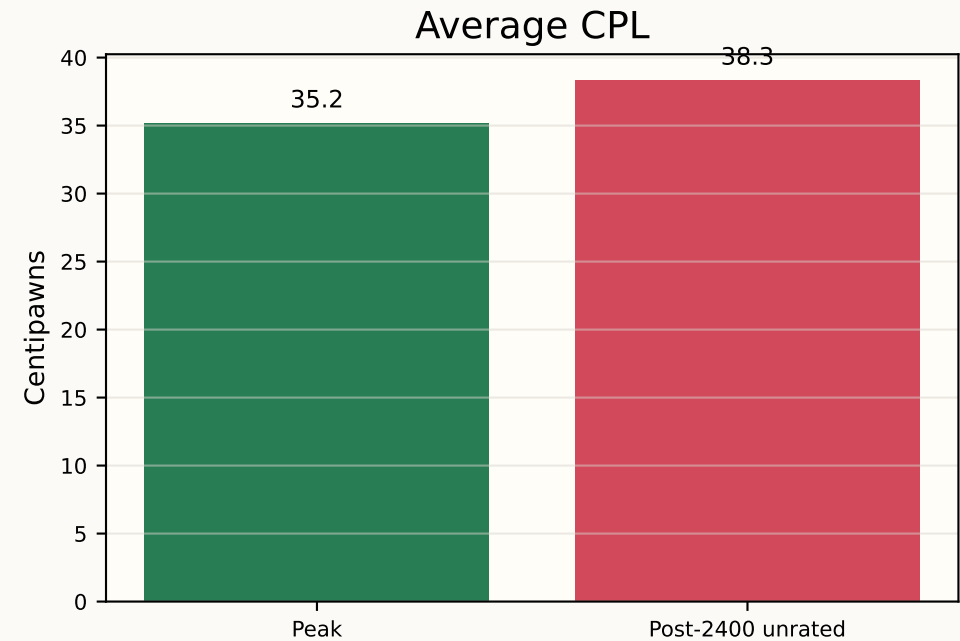

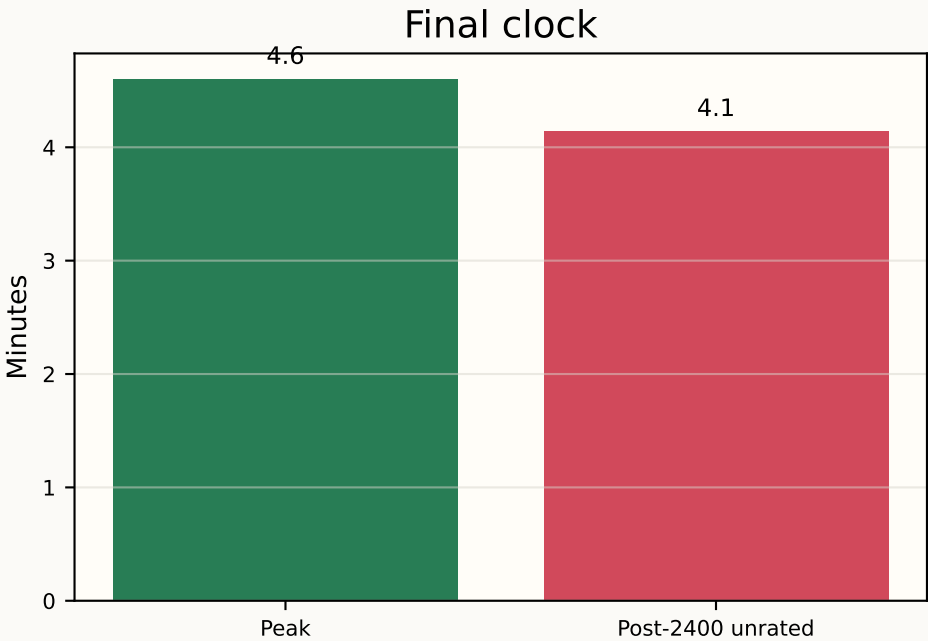

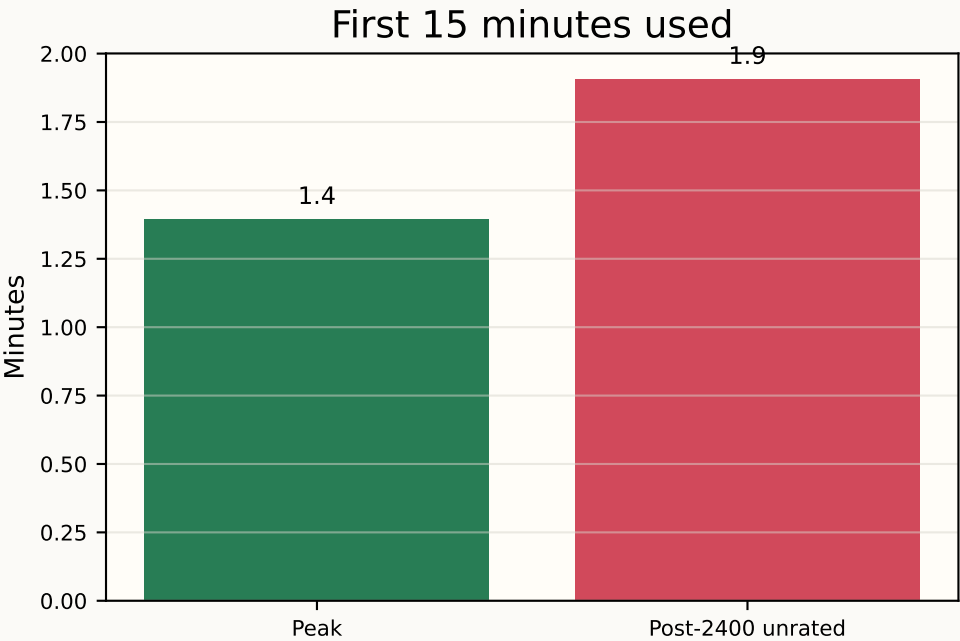

Peak Streak vs Post-2400 Unrated Block

Same quick Stockfish method for both samples

Metric	Peak 2400 streak	Post-2400 unrated
Games	25	50
Record	19-0-6	32-6-12
Score	76.0%	70.0%
Avg opponent	2353	2153
Performance rating	2553	2300
Avg CPL	35.2	38.3
Accuracy proxy	78.2%	76.2%
Blunders/game	0.7	1.0
Mistakes/game	2.7	3.0
Quick bad/game	1.2	1.6
First 10 spent	0:34	0:54
First 15 spent	1:24	1:54
First 20 spent	2:22	2:54
Move 15 clock diff	0:10	0:23
Final clock	4:36	4:08
Final clock diff	1:00	0:32
Opening CPL	12.8	15.8
Middlegame CPL	42.1	51.8
Late CPL	45.2	51.8

Clock And Quality Profile

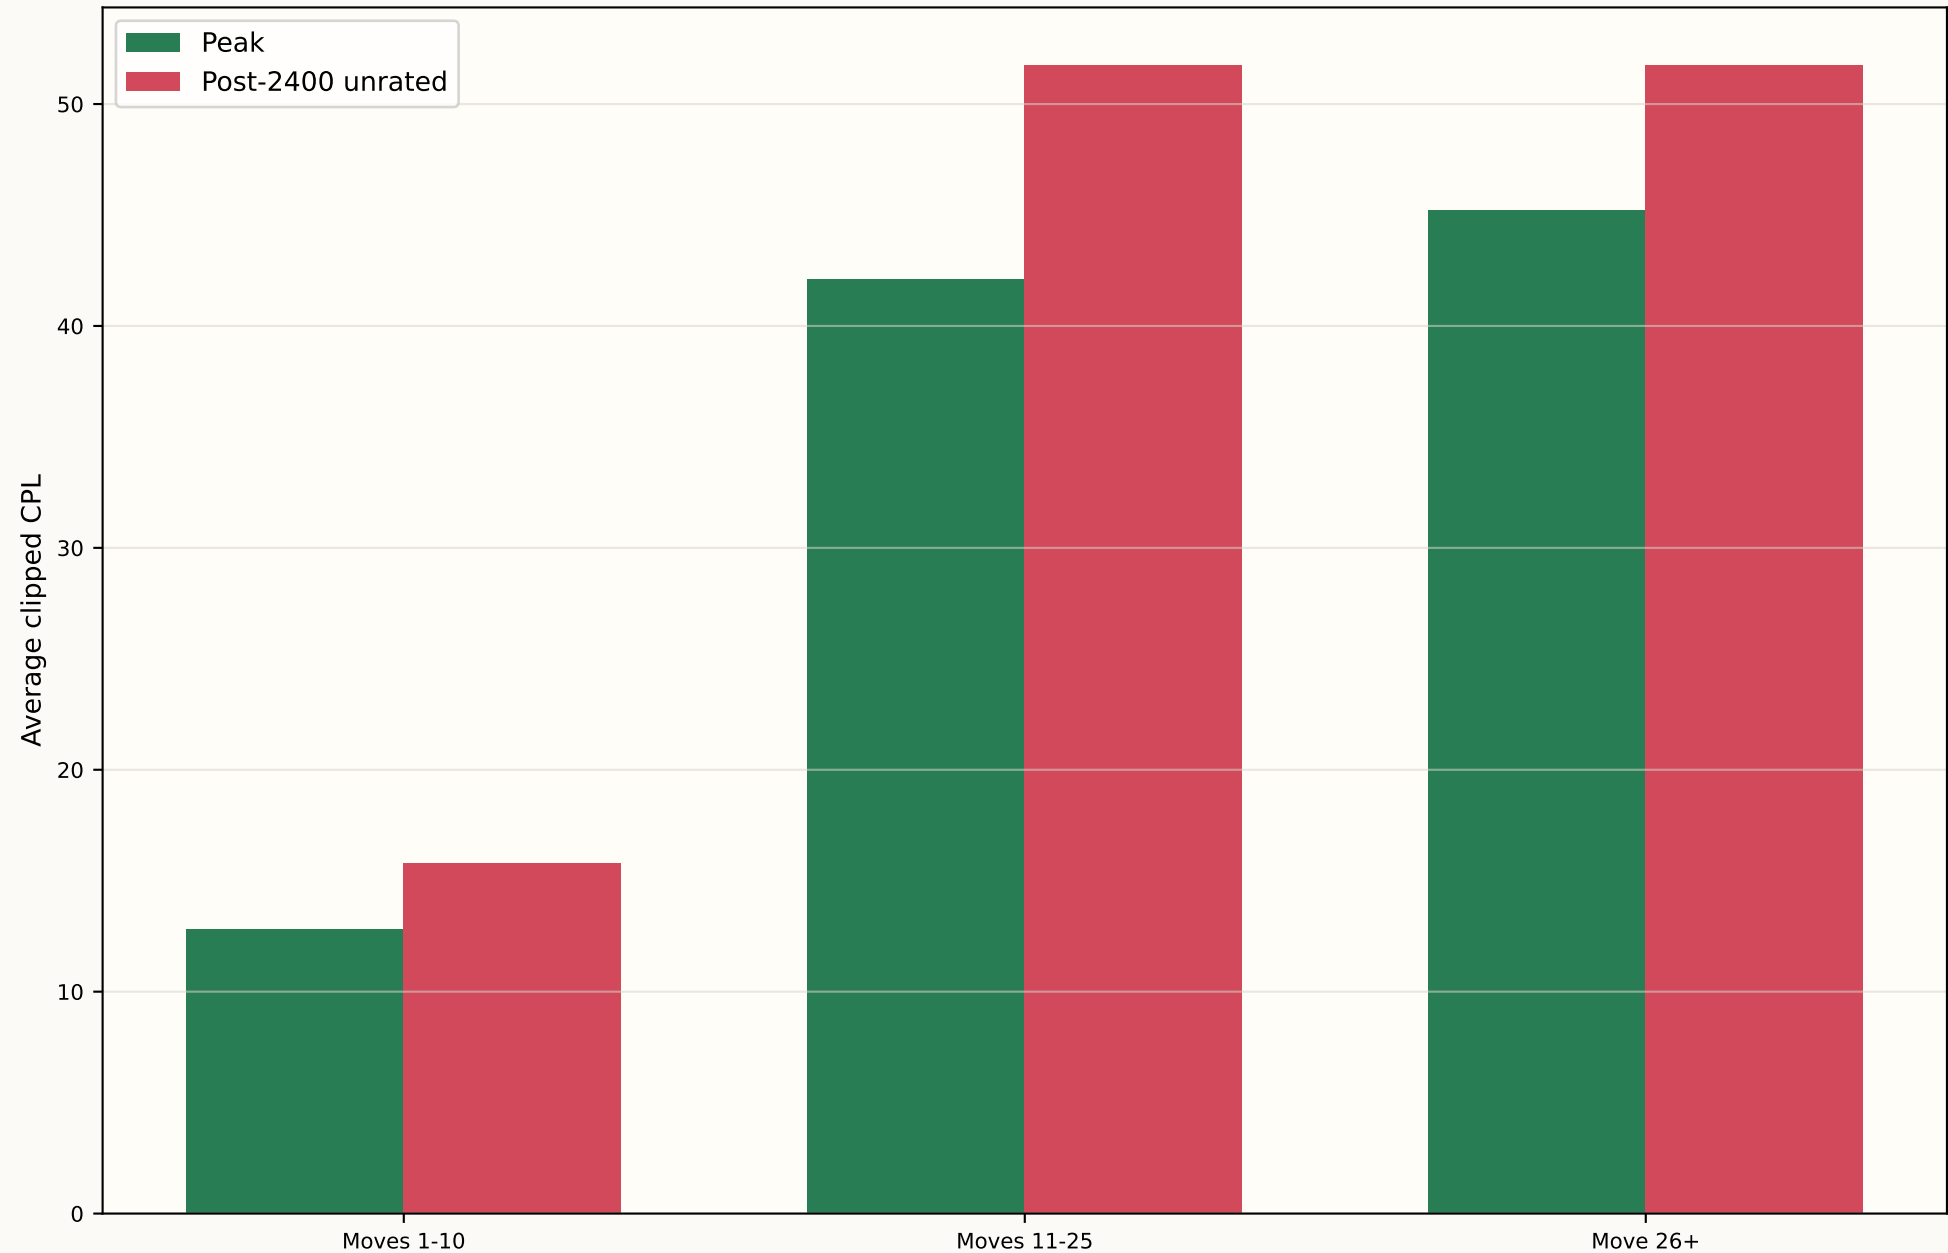

The current block is slower early and tactically looser

Error Location By Phase

Average clipped centipawn loss by user move phase

The biggest gap is still middlegame/late calculation and conversion

Post-2400 Unrated: Where You Score Best And Worst

Grouped by color, clock state, style, and opponent band

Split	Group	Games	Record	Score	Avg opp	PR	CPL
Color	black	28	19-2-7	71.4%	2163	2323	38.2
Color	white	22	13-4-5	68.2%	2140	2272	38.5
Opponent band	<2100	19	13-2-4	73.7%	1996	2175	36.9
Opponent band	2250+	16	7-4-5	56.2%	2320	2363	43.3
Opponent band	2100-2249	15	12-0-3	80.0%	2174	2415	34.9
Move 15	up/equal move15	31	19-6-6	71.0%	2143	2298	36.3
Move 15	down move15	14	10-0-4	71.4%	2155	2314	39.7
Final clock	up/equal final	34	21-6-7	70.6%	2160	2312	37.7
Final clock	down final	16	11-0-5	68.8%	2137	2274	39.6
Style	messy/tactical	20	11-2-7	60.0%	2155	2225	52.1
Style	clean/control	15	14-0-1	93.3%	2092	2550	21.4
Style	normal	10	4-2-4	50.0%	2194	2194	42.1
Style	clock squeeze	5	3-2-0	80.0%	2246	2487	26.5

Best results still come from clean/control games. The danger zone is messy/tactical positions where you are making casual quick decisions despite often having enough total time. That is exactly the opposite of the disciplined process from the rated streak.

Opening Choices After 2400

Openings with at least two post-2400 unrated games

Opening/family	Games	Record	Score	Avg opp	PR	CPL	First15

Exact 10+0 Reset Plan

How to get back to peak process

1. Separate experiments from measurement games

If a game is unrated because you are testing openings, label it training. If it is meant to measure your 2400 strength, play your rated-game process.

2. Restore the first-15 discipline

Your post-2400 block spends about 30 seconds more by move 15. Target move 10 under 0:45, move 15 around 1:15-1:40, and move 20 under 2:30 unless concrete tactics demand more.

3. Delete the quick bad move leak

Before any tactical or irreversible move, force a three-second checks/captures/threats scan. Most of the drop is casual tactical looseness, not lack of understanding.

4. Use clean openings for performance blocks

Your best results come from controlled structures. Save loose English/experimental sidelines for training sessions, not serious 10+0 measurement blocks.

5. Win lower-rated games like a 2400

The post-2400 sample has much lower average opposition. The target is not just winning; it is winning with low blunder count, clean conversion, and time in hand.

6. Run a strict 12-game reset block

Play 12 serious 10+0 games. Stop after two losses or after one game with a quick blunder. Review only the first major mistake and the clock state around it.
