

Rating Trajectory Report

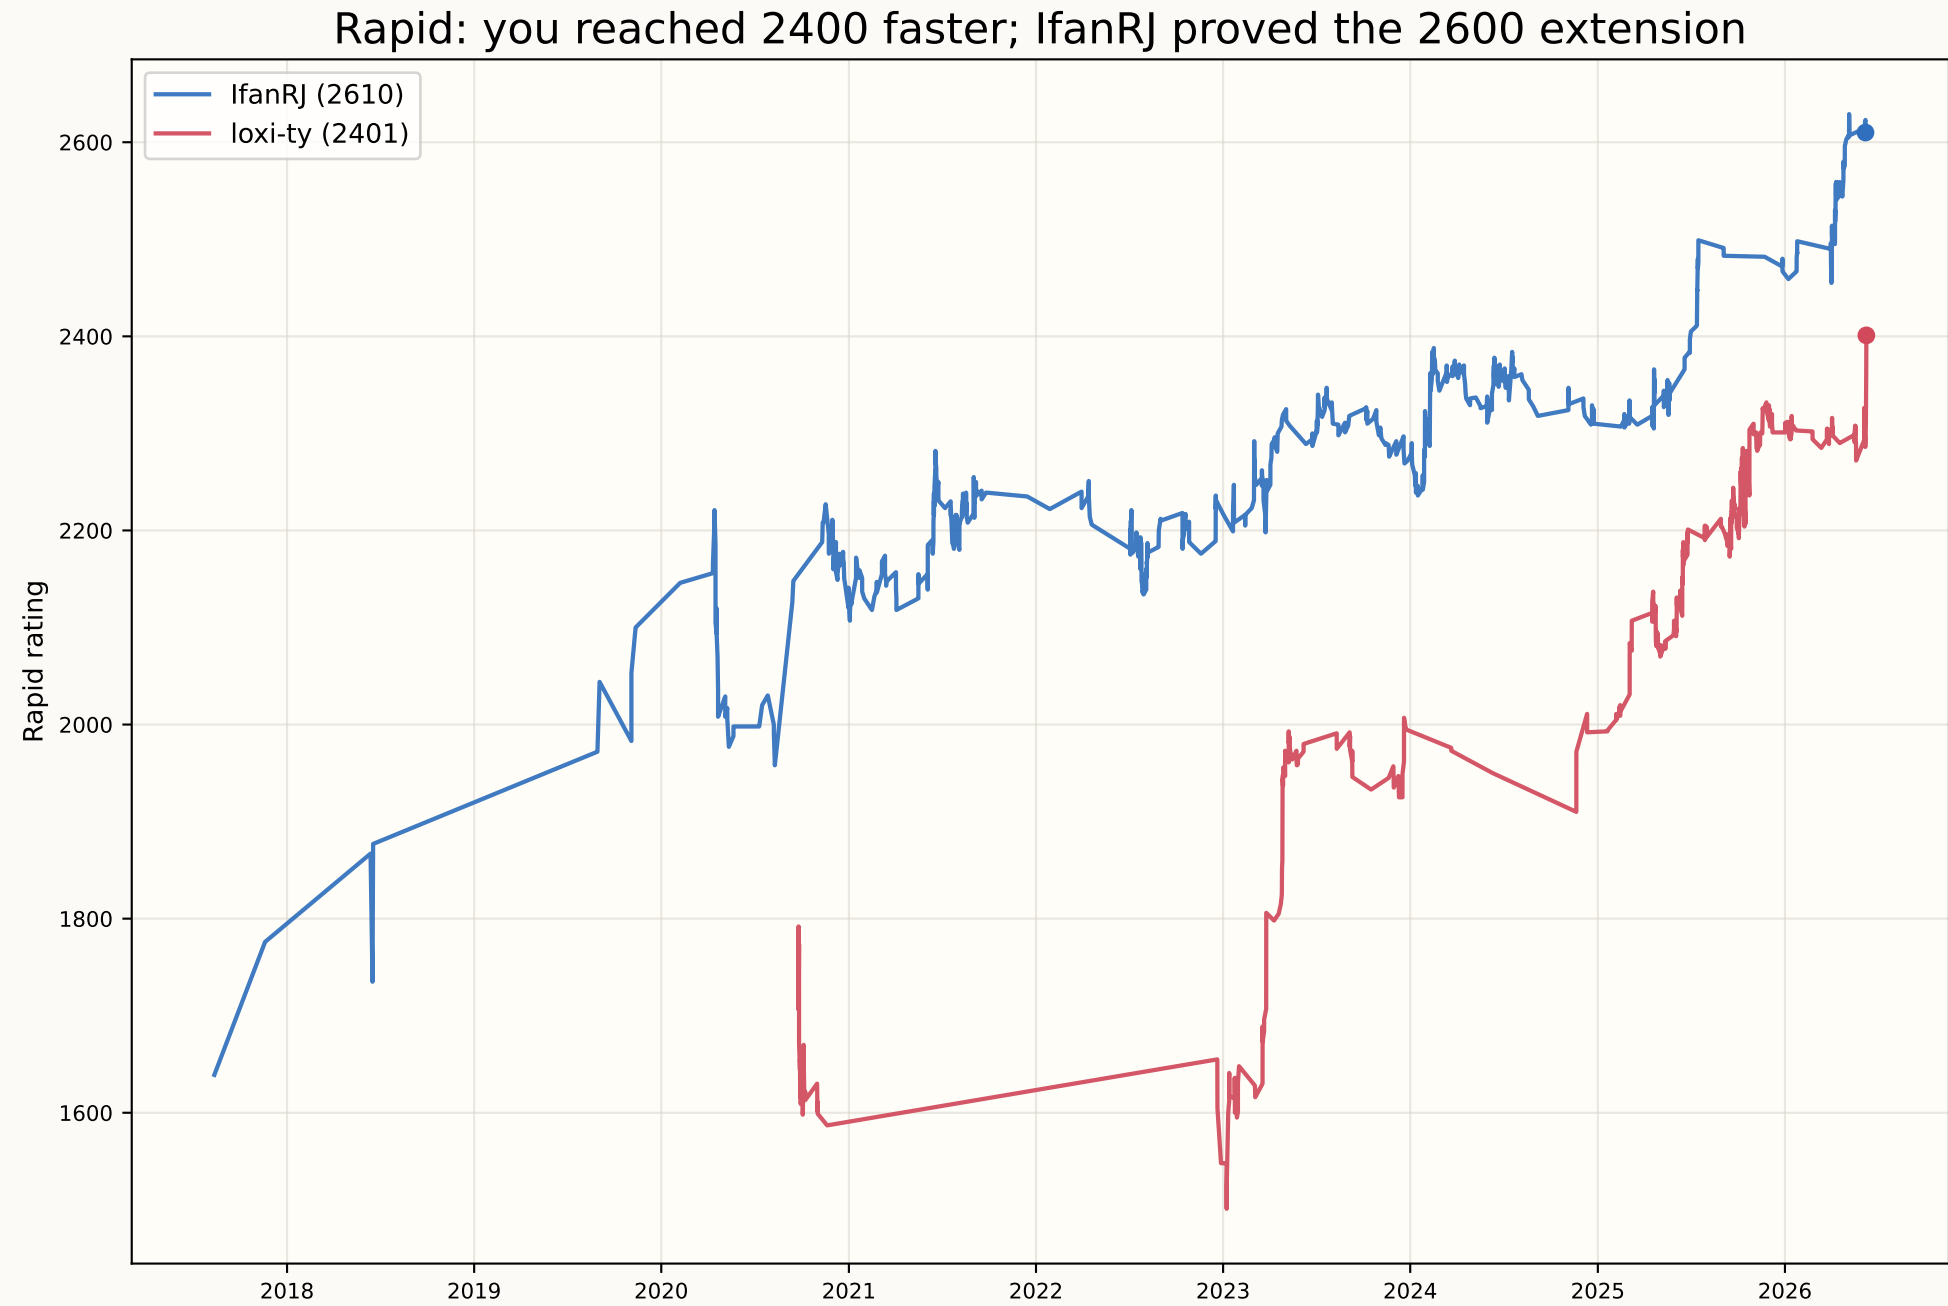

loxi-ty vs IfanRJ: rapid and blitz improvement, volume, milestones, and potential signals

- You reached 2401 rapid in 666 rated rapid games; IfanRJ is currently 2610 rapid with a 2629 peak.
- Your rapid 2300 -> 2400 phase took 136 games and 228 days; IfanRJ's took 377 games and 806 days.
- IfanRJ's rapid 2400 -> 2600 phase took 124 games and 303 days, mostly against 2400-2500 opposition.
- Your blitz climb to 2403 happened in 2358 rated blitz games; IfanRJ has much larger proof volume at 11130 blitz games.
- Main read: your rate to 2400 is comparable or faster in rapid, but IfanRJ has already proven the next plateau: living above 2500/2600 over more games.

Metric	loxi-ty	IfanRJ
Rapid current	2401	2610
Rapid peak	2401	2629
Rapid games	666	1010
Blitz current	2403	2643
Blitz peak	2403	2681
Blitz games	2358	11130

All-Time Rapid Rating Trajectory

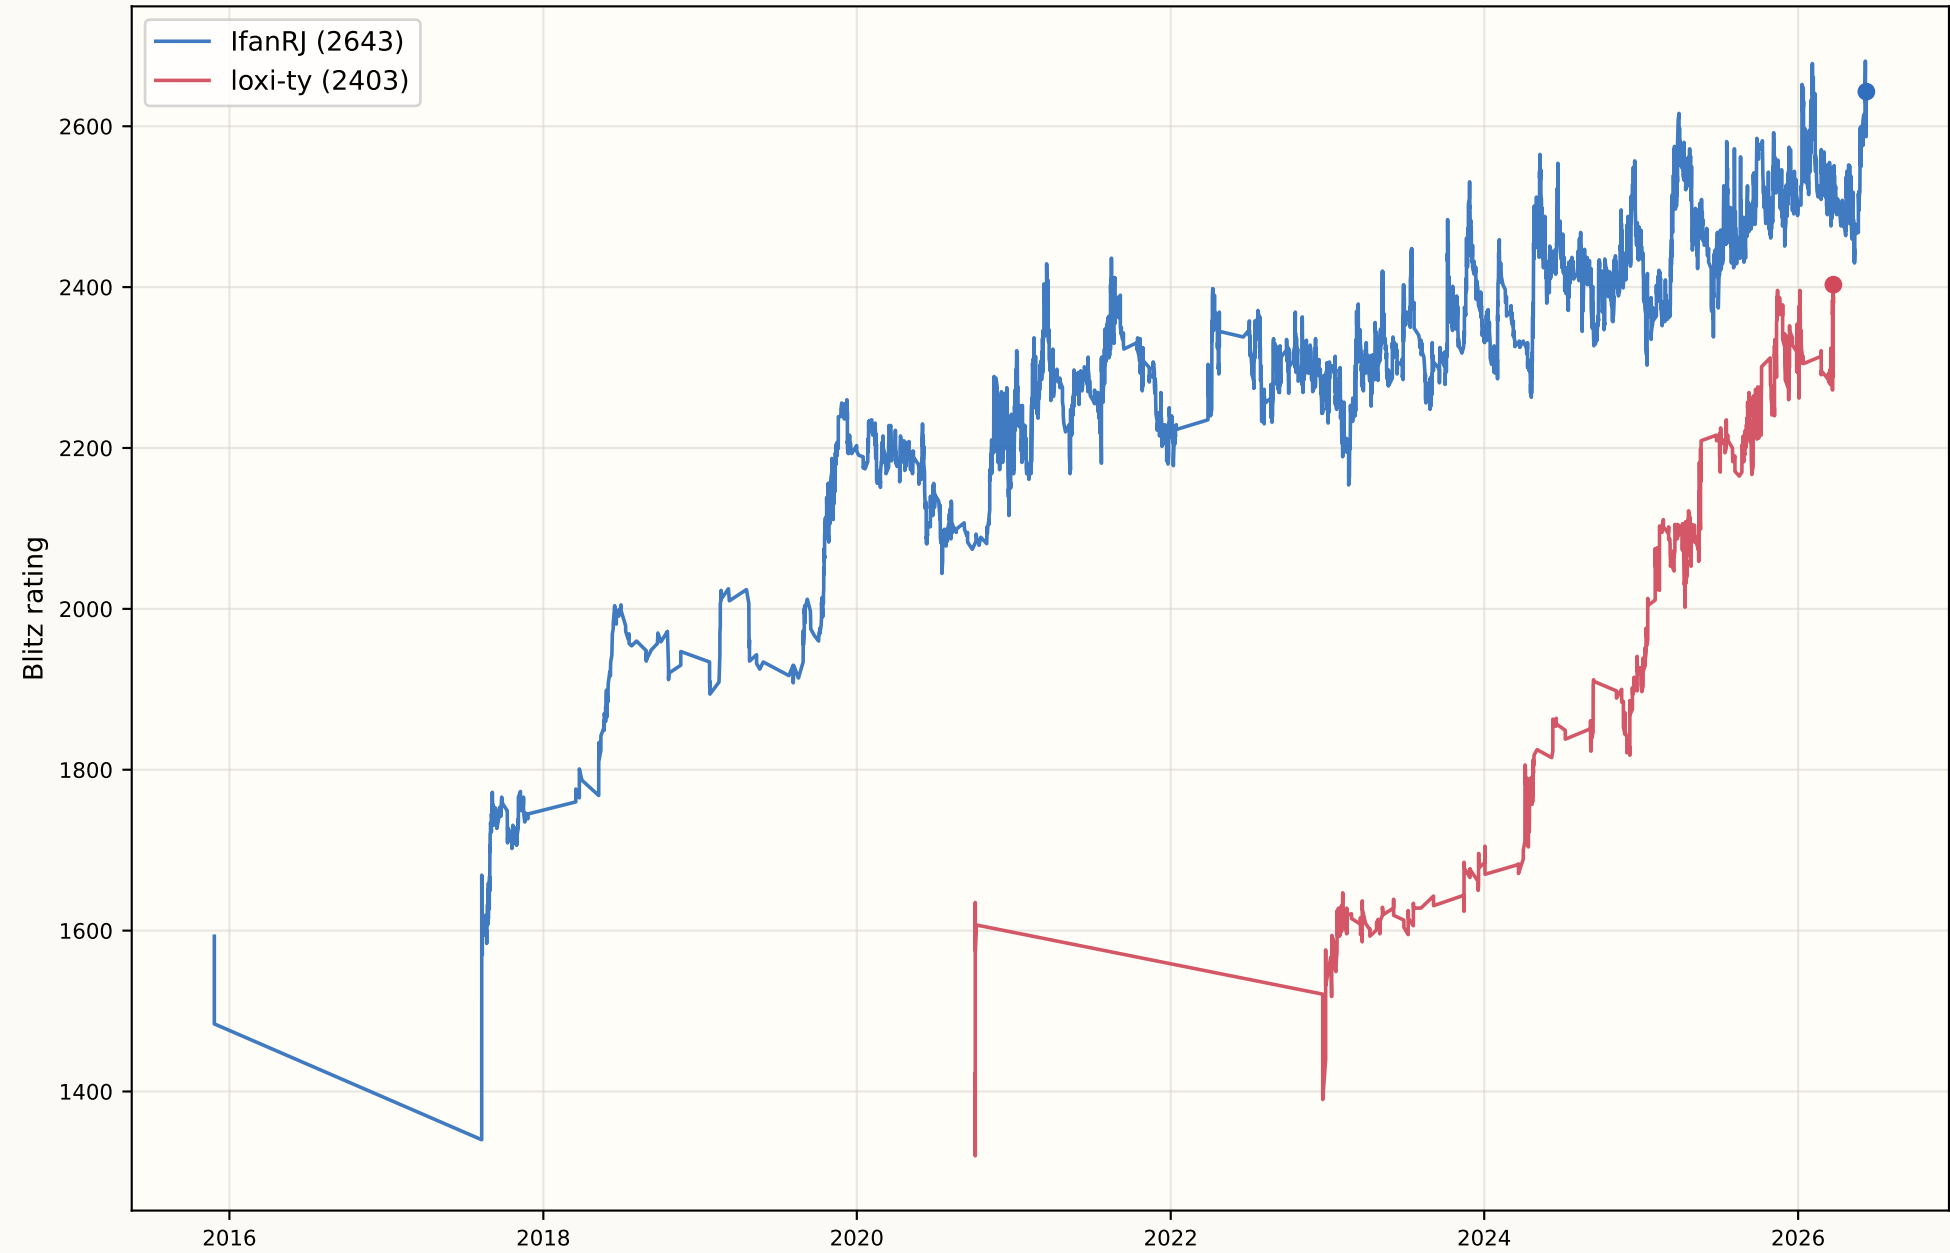

Each point is a rated Chess.com rapid game; lines connect game-end rating tags.

All-Time Blitz Rating Trajectory

Blitz has far more volume for both players, especially IfanRJ.

Blitz: similar arrival at 2400, but IfanRJ has much larger high-rating proof volume

Rapid Comparison

Milestones, recent performance, and 2300/2400/2600 phases

Player	Games	First	Current	Peak	Gain/game	Last25 PR	Last50 PR
loxi-ty	666	1732	2401	2401	1.01	2553	2402
IfanRj	1010	1639	2610	2629	0.96	2612	2572

Rapid milestone	loxi date	loxi game#	Ifan date	Ifan game#
2200	2025-06-25	314	2020-04-13	15
2300	2025-10-23	530	2023-04-17	495
2400	2026-06-08	666	2025-07-01	872
2500	-	-	2026-04-02	924
2600	-	-	2026-04-30	996

Phase	Days	Games	Record	Score	Avg opp	PR
You 2300->2400	228	136	70-12-55	55.5%	2297	2335
Ifan 2300->2400	806	377	182-40-156	53.4%	2296	2320
Ifan 2400->2600	303	124	70-18-37	63.2%	2474	2567

Blitz Comparison

Volume, milestones, and recent form

Player	Games	First	Current	Peak	Gain/game	Last25 PR	Last100 PR
loxi-ty	2358	1422	2403	2403	0.42	2463	2372
IfanRJ	11130	1593	2643	2681	0.09	2673	2644

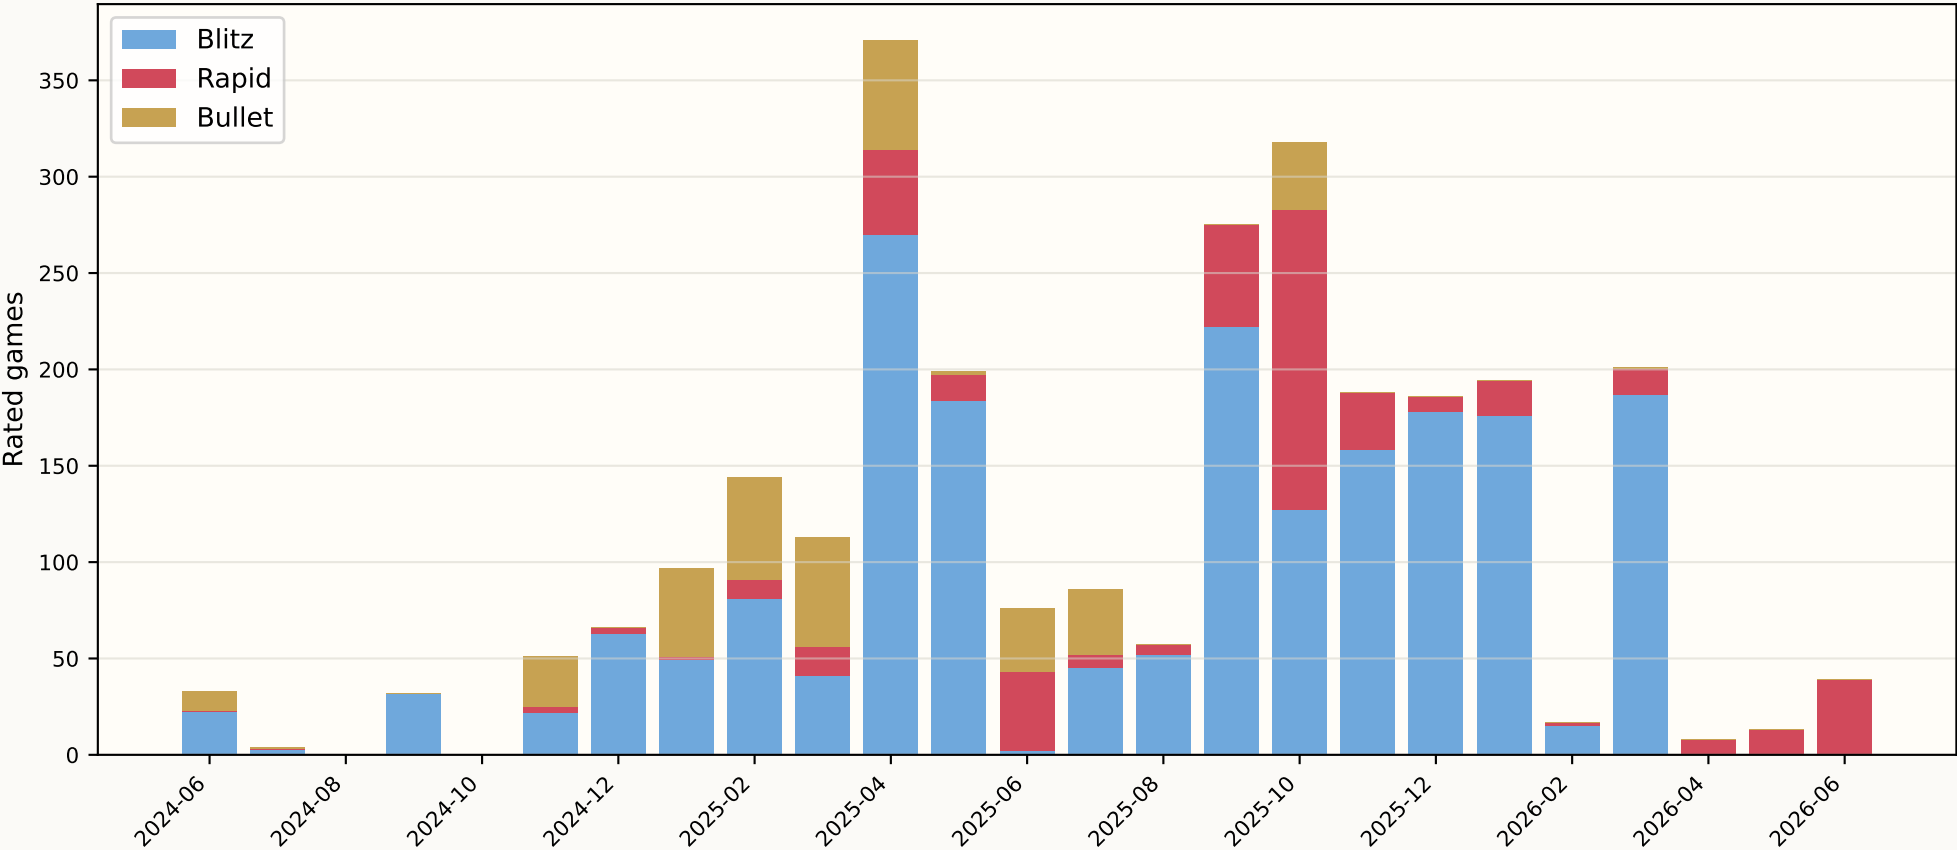

Blitz milestone	loxi date	loxi game#	Ifan date	Ifan game#
1800	2024-04-04	294	2018-03-25	248
2000	2025-01-15	618	2018-06-16	301
2200	2025-05-19	1195	2019-11-12	633
2300	2025-10-07	1619	2021-01-07	1790
2400	2026-03-24	2358	2021-03-11	2219
2500	-	-	2023-11-25	5665
2600	-	-	2025-03-26	8107

Blitz interpretation: you reached 2400 blitz in a game count close to IfanRJ's path to 2400, but IfanRJ's edge is proof volume after 2400: thousands of games played in the 2500-2600 band. For you, blitz looks like useful reps; rapid is current the cleaner measure of deliberate improvement.

Your Volume Over The Last Two Years

Rated games from 2024-06-08 through 2026-06-08

Your online volume is bursty: study/OTB prep, then rating-test blocks

Format	Games	Active days	Games/active day	Start	End	Gain
Rapid	484	109	4.4	1950	2401	451
Blitz	1929	164	11.8	1823	2403	580
Bullet	355	47	7.6	2022	2123	101

Condensed Takeaways

What the curves say about rate of improvement and potential

1. Rapid potential signal

Your rapid 2300 -> 2400 jump was much faster than IfanRJ's by both days and games. That is a real potential signal, not merely a vanity comparison.

2. Proof-volume gap

IfanRJ has already proved the hard part after 2400: he converted 2400 -> 2600 in roughly 124 rapid games, scoring about 63% versus 2474 average opposition. You have just arrived at the start of that test.

3. Volume pattern

Your improvement model is not constant online grinding. It is study/OTB prep, then online bursts where the rating catches up. Your data supports that model, provided the bursts are controlled and process-led.

4. Blitz role

Your blitz volume is much higher than rapid and likely builds pattern recognition. But rapid has been the clearer benchmark for your deliberate improvement and clock-process gains.

5. Next target

Make 2400 rapid boring first. The next serious comparison point is whether your next 50-100 rapid games stabilize around 2400-2450, then whether you can score plus versus 2400-2499 opposition.
