

Ioxi-ty Unrated 10+0 Rapid Report

Latest unrated 10+0 block compared with the rated streak that reached 2400

- Current unrated 10+0 sample: 50 games from 2026-06-08 to 2026-06-17, record 32-6-12, score 70.0%, PR about 2300 against 2153 average opposition.
- Peak 2400 streak: 25 rated games, record 19-0-6, score 76.0%, PR about 2553 against 2353 average opposition.
- Your current block is not a collapse, but it is lower-quality and lower-intensity: average opposition is much lower, PR is lower, and blunders/mistakes are higher.
- Clock process slipped mainly in discipline rather than raw speed: final time is still healthy, but quick bad moves and casual tactical misses rose.
- Main diagnosis: unrated comfort has made you play more experimentally and less conversion-focused. You are winning many games, but not playing the same clean, high-stakes 10+0 process that got you over 2400.

Sample	Games	Record	Score	Avg opp	PR
Peak rated streak	25	19-0-6	76.0%	2353	2553
Current unrated	50	32-6-12	70.0%	2153	2300

Peak Streak vs Current Unrated Block

Same quick Stockfish method for both samples

Metric	Peak 2400 streak	Current unrated

Current losses are concentrated in middlegame/late conversion and tactical moments

Current Block: Where You Score Best And Worst

Grouped by color, clock state, style, and opponent band

Split	Group	Games	Record	Score	Avg opp	PR	CPL
Color	black	28	19-2-7	71.4%	2163	2323	38.2
Color	white	22	13-4-5	68.2%	2140	2272	38.5
Opponent band	<2100	19	13-2-4	73.7%	1996	2175	36.9
Opponent band	2250+	16	7-4-5	56.2%	2320	2363	43.3
Opponent band	2100-2249	15	12-0-3	80.0%	2174	2415	34.9
Move 15	up/equal move15	31	19-6-6	71.0%	2143	2298	36.3
Move 15	down move15	14	10-0-4	71.4%	2155	2314	39.7
Final clock	up/equal final	34	21-6-7	70.6%	2160	2312	37.7
Final clock	down final	16	11-0-5	68.8%	2137	2274	39.6
Style	messy/tactical	20	11-2-7	60.0%	2155	2225	52.1
Style	clean/control	15	14-0-1	93.3%	2092	2550	21.4
Style	normal	10	4-2-4	50.0%	2194	2194	42.1
Style	clock squeeze	5	3-2-0	80.0%	2246	2487	26.5

Best results came when the game stayed clean/controlled and when you preserved the same endgame clock buffer as the peak streak. Worst results clustered in messy/tactical games and in games where you made quick bad decisions despite having enough total time. That means the main issue is not simply 'too slow' or 'too fast'; it is spending time less selectively and treating unrated positions too casually.

Opening Choices In The Current Block

Exact 10+0 Reset Plan

How to get back to peak process

1. Recreate rated-game seriousness in unrated games

Before every move, ask: if this were for 2400 rating, would I still play it this quickly? Your current leak is casual quick decisions, not lack of chess strength.

2. Keep the old clock checkpoints

Target move 10 under 0:45, move 15 around 1:15-1:40, move 20 under 2:30, and preserve at least 3:00 for conversion whenever the position is not forced.

3. Spend only on irreversible/tactical moments

Use time for forcing checks/captures/threats, pawn breaks, queen trades, and endgame transitions. Do not spend 30-60 seconds on ordinary improving moves unless there is concrete calculation.

4. Stop experimenting during measurement blocks

If you want opening experiments, mark the session as training. If you want peak performance, play your cleanest 10+0 repertoire and avoid casual sidelines.

5. Make the next block small and strict

Play a 10-game rated-or-serious block. Stop after two losses, or after one game where you break the quick-blunder rule. Review only the first big mistake and the clock state around it.

6. Win the 2100-2300 games cleanly

The current sample contains many lower-rated opponents. Your goal is not just to win them; it is to win without blunders, without messy conversion, and with a final clock buffer.
